

**Dear Quanto-siasts,**

After four years of project development, we are excited to announce that our team has managed to overcome all the obstacles and challenges that a project like ours brings. As a result of their tremendous efforts, in December 2021, we are launching the Beta Version of our Second Generation Mobile-Only Digital & Blockchain Bank of the Future on Google Play and Apple Store for testing. Upon successful completion of this phase, we are expecting to release it for the general public in Q1 2022.

Stay tuned for our very special announcement in the coming days regarding registration to become one of the lucky 100 who will be able to test and receive EUR 100 on their real cards after testing!

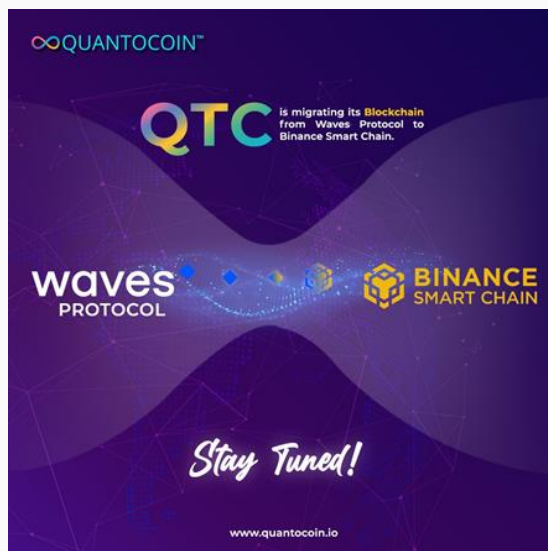

The past six months have kept us very busy with overcoming technical, legal, compliance and security testing challenges. At the same time, we have encountered amazing new collaborations and a huge interest from the investors' side.

**Here are some of the wonderful highlights:**

- 🕒 Over the past few months, we have been ramping up our blockchain team and expanding our respective collaborations with blockchain and DeFi experts from Romania, Russia and Australia. We are honored to have the former CTO of CHRONO.TECH and blockchain expert Mikel join our team.
- 🕒 The blockchain integration will start with a voting solution for our WECARE project. Upon approval by the VISA compliance department, further blockchain solutions like exchange, swaps, lending, staking will be introduced.
- 🕒 On the QUANTOCOIN part of the project, we are excited to announce that we have partnered with the amazing team of TIMEX.IO to migrate our blockchain from the WAVES PROTOCOL to the BINANCE SMART CHAIN, which will allow us and our customers a faster, more secure and cheaper implementation of blockchain and, eventually, crypto transactions. We have been using the Waves Platform for the past four years, and while we appreciate its decentralized exchange opportunities, it is high time to adjust to recent market developments and switch to a ETHEREUM compatible blockchain, awaiting the ETHEREUM 2 release, from which our DeFi solutions shall further benefit.
- 🕒 Due to regulatory requirements, but also in order to have QTC Token holders benefit fully from the QuantoPay project development, we have delayed the listing of our tokens. While we are in discussions with various exchanges, the

launch is now confirmed for January 2022 with TIMEX and LATOKEN, right after the QuantoPay Beta Version release.

- All QUANTOCOIN token holders will shortly be informed about the migration/swap process from their Waves wallets to the Binance Smart Chain compatible wallets. The process will be co-organized and supervised, as per internationally applicable highest KYC and AML standards, by TIMEX and ONFIDO.
- The QuantoPay platform is currently undergoing its final security and compliance checks by our partners BITSENTINEL, RHEINMETALL, ZTP and STARCLUSTER, before a final check and approval by CONTIS and VISA will be provided.
- Our new office in Romania is in Cluj-Napoca in the wonderful location of The Stables. It is close to our new strategic front and backend partners from ZYNK, who have done an amazing job, in the past couple of months, to help us overcome all the latest technical obstacles.
- Last but not the least, we are proud to announce a cooperation with one of the leading international chartered accounting and consulting companies, MAZARS, which is specialized in the Fintech and challenger bank segment. Through their support, we envision the addition of some remarkable investments into our project, in the near future.
